

ERICA

DISTRO BOARD 3-Phase

The Erica distribution board is able to gather power consumption data and send it straight to your desktop.

Improving site power usage, including low energy tools, hybrid systems and active power switching, which require the right knowledge of why and when power is needed. This information eliminates guess work which often leads to ineffective solutions.

Erica brings this information right to your desk, enabling you to make the optimum choice and demonstrate real savings.

Key Benefits:

- Insight into understanding your onsite power consumption.
- User friendly dashboard.
- Secure data management.
- Ability to turn power on and off for different areas of your site.
- In depth reporting on data and advice on how to reduce power wastage, costs and carbon emissions.

Reduced Emissions

Reduced fuel usage and carbon emissions.

Reduced Refuelling

The ProPower can cut fuel usage by up to 90%.

Savings

Demonstrates real savings with remote control, monitoring and reporting capabilities.

In-Depth Reporting

Insight into understanding your onsite power consumption.

Configuration

Plug	125A 415V 3PH (2m tail)
Sockets	14 x 32A 1PH – relay controlled
Sockets	2 x 16A 1PH – not controlled
Boost button	For 1 hour programming override
Local access	ERICA router
Web access	ERICA web dashboard
Protection *Earth spike connection on frame	125A 4P MCB / RCBO on 32A & 16A

Mechanical

Height	1240 mm
Width	727 mm
Depth	410 mm
Weight	125 kg
